Sample Questions to Practice

Practicing with sample questions can help reinforce your understanding and improve your test-taking skills. Here are a few examples of the types of questions you might encounter:

1. Mechanics Question

A car accelerates from rest to a speed of 20 m/s in 5 seconds. What is the acceleration of the car?

2. Electricity Question

In a circuit with a 12V battery and a resistor of 4 ohms, what is the current flowing through the circuit?

3. Waves Question

A sound wave travels at a speed of 340 m/s and has a frequency of 170 Hz. What is the wavelength of the sound wave?

4. Thermodynamics Question

If 100 J of heat is added to a system and the system does 40 J of work, what is the change in internal energy of the system?

Conclusion

Mastering the physics section of the MCAT is essential for aspiring medical students.
