Common Maintenance Tasks

Performing regular maintenance on the 1969 85 hp Evinrude outboard motor is vital for longevity and performance. Here are some common tasks outlined in the workshop manual:

1. Changing the Oil

- Frequency: Every 50 hours of operation or at the beginning of each season.
- Procedure:
 1. Warm up the engine for a few minutes.
 2. Place a drain pan under the motor and remove the oil drain plug.
 3. Allow the oil to fully drain before replacing the drain plug.
 4. Refill with fresh oil through the designated fill cap.

2. Inspecting and Replacing Spark Plugs

- Frequency: Every 100 hours of operation or annually.
- Procedure:
 1. Disconnect the spark plug wires.
 2. Use a socket wrench to remove the spark plugs.
 3. Inspect for wear or carbon buildup.
 4. Replace with new spark plugs if necessary, tightening them to the manufacturer's specifications.

3. Cleaning the Fuel System

- Frequency: Annually or as needed.
- Procedure:
 1. Remove the fuel line and disconnect the fuel tank.
 2. Clean the fuel filter and inspect for any debris.
 3. Use a fuel additive to clean the carburetor.
 4. Reassemble the fuel system and check for leaks.

4. Checking the Propeller

- Frequency: Before each outing.
- Procedure:
 1. Inspect the propeller for damage or wear.
 2. Ensure that the propeller is securely fastened.
 3. Remove any fishing line or debris that may be wrapped around the propeller shaft.

Troubleshooting Common Issues

Even with regular maintenance, issues may arise with the 1969 85 hp Evinrude outboard motor. The workshop manual provides troubleshooting tips for common problems:

1. Engine Won't Start

- Possible Causes:
- Dead battery: Check the battery voltage and connections.
- Fuel blockage: Ensure the fuel lines and filter are clear.
- Faulty ignition system: Inspect the spark plugs and ignition coil.

2. Poor Engine Performance

- Possible Causes:
- Clogged carburetor: Clean the carburetor and fuel passages.
- Low compression: Perform a compression test to check the engine's condition.
- Improper propeller pitch: Ensure the propeller is suitable for your boat and motor combination.

3. Overheating

- Possible Causes:
- Clogged cooling passages: Flush the cooling system to remove debris.
- Faulty water pump: Inspect and replace the water pump impeller if necessary.
- Low coolant levels: Check and refill the cooling system with the appropriate fluid.
