Exam Format and Structure

The structure of the 2023 AP Stats exam is carefully designed to test a range of skills, from conceptual understanding to problem-solving. The exam is divided into multiple sections that include both multiple-choice and free-response questions, each with specific time limits and scoring criteria.

Multiple-Choice Section

This section consists of 40 questions that cover various statistical topics. Students have 1 hour and 30 minutes to complete this portion. The questions assess knowledge of data interpretation, probability calculations, and understanding of distributions. Each question requires selecting the best answer from several options, testing both accuracy and speed.

Free-Response Section

The free-response section includes six questions that require written explanations, calculations, and interpretation of statistical results. Students are given 1 hour and 30 minutes to work through these problems. This section assesses deeper comprehension and the ability to communicate statistical reasoning effectively. Students may encounter tasks such as designing an experiment, analyzing data sets, or explaining the implications of statistical findings.

Scoring and Grading

The total score for the 2023 AP Stats exam ranges from 1 to 5, with 5 indicating exceptional performance. Multiple-choice questions are scored by computer, while free-response answers are evaluated by trained graders using standardized rubrics.
