Diagnostic Radiology CPT Codes

Diagnostic radiology CPT codes cover a wide range of imaging procedures used to diagnose medical conditions through various modalities. These codes are essential for documenting services such as X-rays, CT scans, MRI scans, ultrasound imaging, and mammography. The 2023 radiology CPT codes cheat sheet highlights the importance of understanding the specific codes for each imaging technique, which vary depending on the body part imaged, imaging modality, and whether contrast agents are used. Accurate use of diagnostic radiology CPT codes ensures appropriate billing and compliance with payer policies.

X-ray Imaging Codes

X-ray or radiographic imaging remains one of the most common diagnostic tools. The CPT codes for X-rays differentiate between single views, multiple views, and complete series, with distinct codes assigned for different anatomic regions such as chest, abdomen, extremities, and spine. The 2023 code set includes updates to clarify the coding of additional views and special techniques.

Computed Tomography (CT) Codes

CT imaging codes are categorized by the anatomic region scanned and whether contrast material is administered. The 2023 radiology CPT codes cheat sheet emphasizes the distinction between non-contrast and contrast-enhanced CT scans, which affects reimbursement. Additionally, newer codes accommodate advanced CT techniques like multi-phase studies and high-resolution imaging.

Magnetic Resonance Imaging (MRI) Codes

MRI CPT codes are organized by body part and include specifications for the use of contrast agents and advanced imaging sequences. The 2023 updates provide clearer guidance on coding for whole-body MRI and specialized studies such as cardiac MRI, with attention to technical complexity and image acquisition protocols.

Ultrasound Imaging Codes

Ultrasound codes in radiology cover both diagnostic and limited studies, with differentiation based on the organ or system examined. - MRI Spine: 72141–72158
- Abdominal Ultrasound: 76700–76705

Interventional Radiology CPT Codes

Interventional radiology (IR) CPT codes describe minimally invasive, image-guided procedures that treat various medical conditions. These codes are more complex due to the procedural components and technical skill involved. The 2023 radiology CPT codes cheat sheet highlights the importance of distinguishing between diagnostic angiography, therapeutic interventions, and device placements.

Angiography and Vascular Procedures

Angiographic CPT codes cover the imaging and treatment of blood vessels, including catheter placements, embolizations, and thrombolysis. The 2023 code updates clarify the reporting of selective and super-selective catheterizations, as well as the use of embolic agents and stents.

Non-Vascular Interventions

Non-vascular interventional procedures include biopsies, drainages, and ablations performed under imaging guidance. The 2023 radiology CPT codes cheat sheet emphasizes accurate coding for needle placement, imaging supervision, and therapeutic actions to ensure proper reimbursement.

Device Placement and Removal

CPT codes also encompass the placement and removal of devices such as central venous catheters, nephrostomy tubes, and gastrostomy tubes. The 2023 coding guidelines provide detailed instructions for reporting these services, including imaging guidance and fluoroscopic supervision.

- Diagnostic angiography: 75600–75635
- Transcatheter embolization: 37241–37244
- Biopsy under imaging guidance: 10005–10012
- Central venous catheter placement: 36556

Nuclear Medicine CPT Codes

Nuclear medicine involves the use of radioactive substances to diagnose and treat diseases. The 2023

radiology CPT codes cheat sheet includes codes for various nuclear medicine studies, such as PET scans, bone scans, and thyroid imaging. Proper coding in this category requires understanding the radiopharmaceuticals administered, the imaging technique, and whether single or multiple views are obtained.

Positron Emission Tomography (PET) Codes

PET scan CPT codes detail procedures for metabolic and functional imaging, often combined with CT for anatomical reference. The 2023 codes specify the types of PET studies performed, including oncology, neurology, and cardiology applications, with attention to the radiotracers used.

Bone and Thyroid Scintigraphy Codes

Bone scans and thyroid imaging codes cover the procedures for detecting metabolic activity and abnormalities. The 2023 updates clarify code assignments based on single-photon emission computed tomography (SPECT) or planar imaging techniques.

Therapeutic Nuclear Medicine Codes

Therapeutic applications of nuclear medicine, such as radioisotope therapy for thyroid disorders, are also coded within this category. The 2023 radiology CPT codes cheat sheet outlines the appropriate codes for administration and treatment monitoring.

- PET whole body: 78815
- Bone scan: 78306
- Thyroid uptake and scan: 78014
- Radioisotope therapy: 79005
