Common Problem-Solving Techniques for Brain Teasers:

- Trial and error
- Working backward
- Drawing diagrams or charts
- Creating tables to organize information
- Using algebraic expressions to model the problem

Sample 8th Grade Math Brain Teasers with Solutions

Providing example brain teasers with step-by-step solutions can illustrate effective problem-solving methods and inspire practice. Below are several puzzles typical for 8th graders.

Brain Teaser 1: The Age Puzzle

Problem: Sarah is twice as old as her brother. In 5 years, the sum of their ages will be 45. How old is each sibling now?

Solution: Let the brother's age be x . Then Sarah's age is $2x$. In 5 years, brother's age will be $x + 5$, Sarah's age will be $2x + 5$. Their sum is $(x + 5) + (2x + 5) = 3x + 10 = 45$. Solving for x gives $3x = 35$, so $x = 11.67$. Brother is approximately 12 years old, Sarah is approximately 23 years old.

Brain Teaser 2: The Geometry Challenge

Problem: A rectangle has a perimeter of 48 cm. If the length is twice the width, what are the dimensions of the rectangle?

Solution: Let the width be w cm. Length is $2w$ cm. Perimeter $P = 2(\text{length} + \text{width}) = 2(2w + w) = 6w = 48$ cm. Solving for w : $w = 8$ cm. Length = $2 \times 8 = 16$ cm.

Brain Teaser 3: Number Pattern Puzzle

Problem: Find the next number in the sequence: 2, 6, 12, 20, 30, ...

Solution: The pattern involves adding consecutive even numbers: 2 (+4) 6 (+6) 12 (+8) 20 (+10) 30. The next addition is +12, so the next number is $30 + 12 = 42$.
