Historical Context of A Journal of the Plague Year

The historical setting of **a journal of the plague year** is the Great Plague of London in 1665, which was the last major outbreak of bubonic plague in England. The epidemic resulted in the deaths of an estimated 100,000 people, roughly a quarter of London's population at the time. The plague was caused by the bacterium *Yersinia pestis* and was transmitted primarily through flea-infested rats. London's crowded and unsanitary conditions facilitated the rapid spread of the disease.

The year 1665 was marked by widespread panic, quarantine measures, and a collapse of normal social functions. Public gatherings were banned, many fled the city, and entire households were sometimes sealed off to prevent contagion. This backdrop provides the foundation for Defoe's narrative, which captures both the personal and public dimensions of the crisis.

The Great Plague of London

The Great Plague was part of the larger Second Pandemic, which began with the Black Death in the 14th century. London's outbreak in 1665 was particularly severe due to the lack of effective medical knowledge and public health infrastructure. The plague caused symptoms such as buboes, fever, and delirium, leading to a swift and painful death in many cases.

Social and Economic Impact

The plague devastated London's economy and social fabric. Markets and businesses closed, labor shortages became acute, and many families lost multiple members. Public fear led to stigmatization of the sick and disruption of traditional social support networks.

Author Background and Authorship Debate

Daniel Defoe, the attributed author of **a journal of the plague year**, was an English writer, trader, and pamphleteer best known for his novel "Robinson Crusoe." Defoe was born in 1660 and lived through several major historical events, though he was only a child during the 1665 plague. This has led to scholarly debate about the extent to which the journal represents firsthand experience versus a fictionalized reconstruction based on research and testimony.

Daniel Defoe's Life and Career

Defoe was a prolific writer and social commentator whose works often blended fact and fiction. His experience as a merchant and political observer informed much of his writing, including *a journal of the plague year*. The book was published in 1722, nearly 60 years after the plague, suggesting that Defoe relied heavily on secondary sources and interviews.

Authorship and Authenticity Debate

Some scholars argue that the book should be considered historical fiction rather than a pure journalistic account.
