Frequently Asked Questions

What topics are typically covered in an Algebra 1 Unit 4 test?

An Algebra 1 Unit 4 test usually covers linear equations, graphing lines, slope and intercepts, solving inequalities, and systems of equations.

How do you find the slope of a line given two points in Algebra 1?

The slope is found using the formula $(y_2 - y_1) / (x_2 - x_1)$, where (x_1, y_1) and (x_2, y_2) are the coordinates of the two points.

What is the standard form of a linear equation tested in Algebra 1 Unit 4?

The standard form of a linear equation is $Ax + By = C$, where A, B, and C are integers, and $A \geq 0$.

How can you solve a system of linear equations in Algebra 1 Unit 4?

You can solve a system of linear equations by graphing, substitution, or elimination methods.

What does the y-intercept represent in a linear equation?

The y-intercept is the point where the line crosses the y-axis, representing the value of y when x is zero.

How do you graph an inequality on the coordinate plane?

To graph an inequality, first graph the boundary line (solid for $\leq$ or $\geq$, dashed for $<$ or $>$), then shade the region that satisfies the inequality.

What is the difference between an equation and an inequality in Algebra 1 Unit 4?

An equation states that two expressions are equal, while an inequality shows that one expression is greater than or less than the other.

How do you write the equation of a line given the slope and a point?

Use the point-slope form: $y - y_1 = m(x - x_1)$, where m is the slope and (x_1, y_1) is the given point.
