Scoring and Grading Criteria for the AP Psychology Exam

The ap psych 2023 exam uses a composite scoring system combining multiple-choice and free-response sections. Understanding how the exam is scored can help students focus their efforts appropriately during preparation.

Multiple-Choice Scoring

Each correct answer in the multiple-choice section contributes one point to the raw score. There is no penalty for incorrect answers, encouraging students to answer every question. The raw score is then converted to a scaled score.

Free-Response Scoring

Free-response questions are scored by trained readers using established rubrics. Each question is evaluated on accuracy, depth of explanation, and use of psychological terminology. Scores from both free-response questions are combined and converted to a scaled score.

Final Score and AP Grade

The College Board converts the total scaled score into a final AP score ranging from 1 to 5. Scores of 3 or higher are generally considered passing

and may qualify for college credit depending on the institution. The distribution of scores varies each year based on exam difficulty and student performance.
