Overview of AP Psychology Exam Structure

Understanding the format and structure of the AP Psychology exam is fundamental to effective preparation. The exam consists of two primary sections: multiple-choice questions and free-response

questions. Each section assesses different skills and content knowledge, requiring students to be well-rounded in both factual recall and analytical thinking. Familiarity with the exam layout helps students manage their time efficiently and approach each question type with confidence.

Multiple-Choice Section

The multiple-choice portion comprises 100 questions, covering a broad range of psychological topics. Students are allotted 70 minutes to complete this section, emphasizing the need for quick comprehension and decision-making. The questions test knowledge of definitions, theories, experimental results, and application of psychological principles.

Free-Response Section

The free-response section includes two questions to be answered in 50 minutes. These questions require students to construct well-organized essays that demonstrate critical thinking and the ability to synthesize psychological concepts. Responses often involve designing experiments, interpreting data, and evaluating psychological theories.
