Understanding the Architect Examination Process

Before diving into preparation strategies, it's important to understand the architecture examination process, which typically involves two key components: the Architect Registration Examination (ARE) and the Architect Licensing Exam (ALE).

The Architect Registration Examination (ARE)

The ARE is a multi-division exam that assesses your knowledge, skills, and ability to provide the services necessary to safeguard the health, safety, and welfare of the public. It consists of several sections, each focusing on different aspects of architectural practice. The current version of the ARE includes the following divisions:

1. Practice Management (PjM)
2. Project Management (PcM)
3. Programming & Analysis (PA)
4. Project Planning & Design (PPD)
5. Project Development & Documentation (PDD)
6. Construction & Evaluation (CE)

Each division tests various competencies, from managing practices and resources to understanding technical documentation and evaluating construction processes.

The Architect Licensing Exam (ALE)

In some jurisdictions, the ALE may be a supplementary exam that assesses a candidate's knowledge of state-specific laws, regulations, and practices. It's crucial for candidates to check with their local licensing board for specific requirements.
