Understanding the Aurus Mini Split System

Mini-split systems, including the Aurus model, consist of two main components: an indoor unit and an outdoor unit. They work together to provide both cooling and heating, making them suitable for various climates and settings.

Key Components of the Aurus Mini Split

1. **Indoor Unit:** This is the part of the system that distributes conditioned air into the living space. It typically features:
 - A fan to circulate air
 - A filter to clean the incoming air
 - An evaporator coil that cools or heats the air
2. **Outdoor Unit:** Located outside the building, this component is responsible for dissipating heat. It includes:
 - A compressor that compresses the refrigerant
 - A condenser coil that releases heat outside
 - A fan that helps in heat dissipation
3. **Refrigerant Lines:** These are insulated pipes that connect the indoor and outdoor units, allowing refrigerant to flow back and forth for heat exchange.
4. **Thermostat/Remote Control:** This device allows users to set desired temperatures and modes of operation, providing convenience and control.
