Understanding Whisky

The production process typically involves mashing, fermentation, distillation, and aging in wooden casks. These steps, combined with regional influences and traditional methods, contribute to the unique characteristics of each whisky.

Types of Whisky

There are several major types of whisky, each with its distinct flavor profile and production methods:

1. **Scotch Whisky:** Must be made in Scotland, typically from malted barley. It is known for its smoky flavor, especially if it is from the Islay region.
2. **Irish Whiskey:** Generally smoother than Scotch, it is triple distilled and often includes a mix of malted and unmalted barley.
3. **American Whiskey:** Includes varieties such as bourbon and rye, with bourbon being sweeter and more full-bodied due to its corn base.
4. **Canadian Whisky:** Known for its lighter and smoother flavor, often made from a blend of grains.
