It not only provides the correct answers but also serves as a guide to understanding the problem-solving process involved in mole calculations. Below is a structured answer key that covers typical problems found in Chemquest 39.

Sample Questions and Answers

1. Question 1: Calculate the number of moles in 50 grams of water (H_2O).
 - Answer:
 - Molar mass of H_2O = $2(1.01 \text{ g/mol for H}) + 16.00 \text{ g/mol for O} = 18.02 \text{ g/mol}$
 - Moles = mass/molar mass = $(50 \text{ g}) / 18.02 \text{ g/mol} \approx 2.77 \text{ moles}$
2. Question 2: How many molecules are in 3 moles of carbon dioxide (CO_2)?
 - Answer:
 - Number of molecules = moles $\times$ Avogadro's number = $(3 \text{ moles}) \times 6.022 \times 10^{23} \text{ molecules/mole} \approx 1.81 \times 10^{24} \text{ molecules}$
3. Question 3: Convert 0.5 moles of sodium chloride (NaCl) to grams.
 - Answer:
 - Molar mass of NaCl = $22.99 \text{ g/mol (Na)} + 35.45 \text{ g/mol (Cl)} = 58.44 \text{ g/mol}$
 - Mass = moles $\times$ molar mass = $(0.5 \text{ moles}) \times 58.44 \text{ g/mol} \approx 29.22 \text{ g}$
4. Question 4: How many moles are in 75 grams of sodium (Na)?
 - Answer:
 - Molar mass of Na = 22.99 g/mol
 - Moles = mass/molar mass = $(75 \text{ g}) / 22.99 \text{ g/mol} \approx 3.26 \text{ moles}$
5. Question 5: If 2 moles of magnesium (Mg) react with oxygen (O_2), how many grams of magnesium oxide (MgO) can be formed?

- Answer:
- Balanced equation: $2 \text{Mg} + \text{O}_2 \rightarrow 2 \text{MgO}$
- Molar mass of MgO = 24.31 g/mol (Mg) + 16.00 g/mol (O) = 40.31 g/mol
- Moles of MgO produced = 2 moles
- Mass = moles $\times$ molar mass = $2 \text{ moles} \times 40.31 \text{ g/mol} \approx 80.62 \text{ g}$
