Understanding Decimals and Place Value

Decimals are numbers that have a whole number part and a fractional part, separated by a decimal point. The place value of a digit in a decimal number indicates its value based on its position relative to the decimal point.

For example, in the decimal number 34.567:

- The digit '3' is in the tens place (30).
- The digit '4' is in the ones place (4).
- The digit '5' is in the tenths place (0.5).
- The digit '6' is in the hundredths place (0.06).
- The digit '7' is in the thousandths place (0.007).

Understanding this structure is crucial for students not only to perform calculations but also to interpret data accurately.
